
UNIT-I

1. What is Cyberspace?

- a. A physical computer network
- b. A virtual space for online communication
- c. A type of computer virus
- d. An offline storage system

Answer: b. A virtual space for online communication

2. Who coined the term "Cyberspace" and in which year?

- a. Tim Berners-Lee, 1989
- b. William Gibson, 1984
- c. Mark Zuckerberg, 2004
- d. Al Gore, 1997

Answer: b. William Gibson, 1984

3. What is the primary purpose of creating Cyberspace?

- a. Gaming
- b. E-commerce
- c. Entertainment
- d. Sharing information and global communication

Answer: d. Sharing information and global communication

4. What are the fundamental building blocks of the Internet during the Innovation Phase?

- a. Web browsers
- b. Packet-switching hardware, TCP/IP, client/server computing
- c. Cloud services
- d. DNS and HTTP protocols

Answer: b. Packet-switching hardware, TCP/IP, client/server computing

5. Who is credited with inventing the World Wide Web in 1989?

- a. Bill Gates
- b. Steve Jobs
- c. Tim Berners-Lee
- d. Larry Page

Answer: C) Tim Berners-Lee

6. What does the term "Internet of Things (IoT)" refer to in Cyberspace?

- a. Internet browsers
- b. Connected devices exchanging data
- c. Social media platforms
- d. Cloud computing services

Answer: B) Connected devices exchanging data

7. What does DNS stand for in the context of Cyberspace?

- a. Dynamic Network System
- b. Domain Name System
- c. Data Network Security
- d. Digital Naming Service

Answer: B) Domain Name System

8. What does TCP/IP stand for in the context of Internet communication?

- a. Total Control Protocol/Internet Protocol
- b. Transmission Control Protocol/Internet Protocol
- c. Technical Control Protocol/Internet Process
- d. Transferable Communication Protocol/Internet Process

Answer: B) Transmission Control Protocol/Internet Protocol

9. What organization establishes web standards to ensure compatibility and accessibility across different devices and browsers?

- a. W3C (World Wide Web Consortium)
- b. IEEE (Institute of Electrical and Electronics Engineers)
- c. ISO (International Organization for Standardization)
- d. IETF (Internet Engineering Task Force)

Answer: A) W3C (World Wide Web Consortium)

10. What is the official birthday of the Internet, marking the establishment of the TCP/IP protocol?

- a. January 1, 1980
- b. January 1, 1983
- c. July 4, 1976
- d. March 12, 1990

Answer: B) January 1, 1983

11. Which of the following is a web-based cyber-attack that attempts to steal sensitive information by masquerading as a trustworthy entity?

- a. Worm
- b. Phishing
- c. Trojan Horse
- d. Denial of Service

Answer: B) Phishing

12. What is the term for a self-replicating malicious program that spreads throughout computer files?

- a. Worm
- b. Trojan Horse
- c. Virus
- d. Phishing

Answer: C) Virus

13. Which technology involves creating and maintaining websites and web applications?

- a. Cloud Computing
- b. Web Development
- c. Mobile Web
- d. Networking

Answer: B) Web Development

14. Which organization oversees domain name system management and policy?

- a. Internet Society (ISOC)
- b. Internet Engineering Task Force (IETF)
- c. Internet Corporation for Assigned Names and Numbers (ICANN)
- d. World Wide Web Consortium (W3C)

Answer: c. Internet Corporation for Assigned Names and Numbers (ICANN)

15. What is the primary goal of Cybersecurity?

- a. Ensuring data accuracy
- b. Preventing unauthorized access and protecting systems
- c. Maximizing processing power
- d. Facilitating data sharing

Answer: b. Preventing unauthorized access and protecting systems

16. Which protocol is fundamental to internet communication and allows data packets to be routed across the network?

- a. HTTP
- b. FTP
- c. TCP/IP
- d. SMTP

Answer: c. TCP/IP

17. What does the World Wide Web (WWW) consist of?

- a. A collection of servers
- b. A global system of interconnected documents and resources
- c. A type of computer virus
- d. A hardware component of the internet

Answer: b. A global system of interconnected documents and resources

18. What phase of the Internet's history is characterized by commercialization?

- a. Innovation Phase
- b. Institutionalization Phase
- c. Commercialization Phase
- d. Development Phase

Answer: c. Commercialization Phase

19. What is the primary responsibility of the Internet Architecture Board (IAB)?

- a. Develop technical standards for the Internet
- b. Manage domain names
- c. Adjudicate on disputes about standards
- d. Enforce cyber laws

Answer: c. Adjudicate on disputes about standards

20. Which attack aims to make a server or network resource unavailable to users?

- a. Injection attack
- b. Denial of Service (DoS) attack
- c. Phishing attack
- d. Worm attack

Answer: b. Denial of Service (DoS) attack

21. What is the primary purpose of the Internet Engineering Task Force (IETF)?

- a. Develop technical standards for the Internet
- b. Manage domain names
- c. Adjudicate on disputes about standards
- d. Enforce cyber laws

Answer: a. Develop technical standards for the Internet

22. What technology is responsible for translating domain names into IP addresses?

- a. HTTP
- b. FTP
- c. DNS
- d. TLS

Answer: c. DNS

23. What is the primary goal of a Trojan horse?

- a. Spread to uninfected computers
- b. Steal sensitive information
- c. Manipulate computer settings
- d. Replicate itself

Answer: c. Manipulate computer settings

24. What type of attack involves masquerading as a trustworthy entity to steal sensitive information?

- a. Injection attack
- b. Phishing attack
- c. Session Hijacking
- d. Denial of Service (DoS) attack

Answer: b. Phishing attack

25. What phase of the Internet's history is characterized by the conceptualization and implementation of fundamental building blocks?

- a. Innovation Phase
- b. Institutionalization Phase
- c. Commercialization Phase
- d. Development Phase

Answer: a. Innovation Phase

26. What technology enables the seamless user experience on smartphones and tablets?

- a. Web development
- b. Mobile web technology
- c. Cloud computing
- d. Quality of Service (QoS)

Answer: b. Mobile web technology

27. What ensures that systems and data are accurate and trustworthy in cybersecurity?

- a. Availability
- b. Authentication
- c. Integrity
- d. Confidentiality

Answer: c. Integrity

28. Which organization promotes the use and future development of the internet?

- a. Internet Society (ISOC)
- b. Internet Engineering Task Force (IETF)
- c. World Wide Web Consortium (W3C)
- d. Internet Corporation for Assigned Names and Numbers (ICANN)

Answer: a. Internet Society (ISOC)

29. What does SSL/TLS encryption primarily contribute to in internet infrastructure?

- a. Data privacy
- b. Network infrastructure
- c. DNS functionality
- d. Cloud services

Answer: a. Data privacy

30. What is the purpose of an Injection attack?

- a. Encryption of data
- b. Manipulation of the application to fetch information
- c. Stealing sensitive information
- d. Making a server unavailable

Answer: b. Manipulation of the application to fetch information

31. What is the primary responsibility of the Internet Engineering Steering Group (IESG)?

- a. Develop technical standards for the Internet
- b. Manage domain names
- c. Review standards proposed by the IETF
- d. Enforce cyber laws

Answer: c. Review standards proposed by the IETF

32. What characterizes the Institutionalization Phase of the Internet's history?

- a. Conceptualization of fundamental building blocks
- b. Commercialization of the Internet
- c. Development of hardware components
- d. Funding and legitimization by large institutions

Answer: d. Funding and legitimization by large institutions

33. What technology is used to optimize data delivery by caching content at various locations worldwide?

- a. CDN (Content Delivery Network)
- b. VPN (Virtual Private Network)
- c. DNS (Domain Name System)
- d. HTTP (Hypertext Transfer Protocol)

Answer: a. CDN (Content Delivery Network)

34. What is the primary goal of the Innovation Phase of the Internet's history?

- a. Commercialization
- b. Conceptualization of fundamental building blocks
- c. Development of hardware components
- d. High-speed data transfer

Answer: b. Conceptualization of fundamental building blocks

35. What does the lack of formal framework in cyberspace result in?

- a. Strong regulation
- b. Anonymity (nobody's domain)
- c. Centralized control
- d. Limited freedom

Answer: b. Anonymity (nobody's domain)

36. What is the primary challenge in extending traditional laws to cyberspace?

- a. Multiple Jurisdictions
- b. Lack of technical knowledge
- c. Expensive process
- d. Obtaining digital evidence

Answer: a. Multiple Jurisdictions

37. What does URL stand for?

- a. Universal Resource Locator
- b. Unified Resource Locator
- c. Uniform Resource Locator
- d. Ultimate Resource Locator

Answer: c. Uniform Resource Locator

38. What does the term "governance" in cyberspace refer to?

- a. Development of software
- b. Policies, regulations, and oversight
- c. Web design
- d. Internet infrastructure management

Answer: b. Policies, regulations, and oversight

39. What does the term "WWW" stand for?

- a. World Web Wonders
- b. Wide World of Web
- c. World Wide Web
- d. Web World Wide

Answer: c. World Wide Web

40. What does the term "HTML" stand for?

- a. HyperText Markup Language
- b. Hypnotic Text Manipulation Language
- c. High-Tech Multimedia Language
- d. Hyperlink and Text Management Language

Answer: a. HyperText Markup Language

41. What are the building blocks of a computer's hardware?

- a. RAM, SSD, CPU
- b. CPU, GPU, PSU
- c. CPU, RAM, Storage (HDD/SSD), Input/Output devices
- d. GPU, SSD, Monitor

Answer: c) CPU, RAM, Storage (HDD/SSD), Input/Output devices

42. What does QoS stand for in the context of internet infrastructure?

- a. Quality of Security
- b. Quality of Service
- c. Quantity of Servers
- d. Quantum of Speed

Answer: b) Quality of Service

43. What is the primary goal of data encryption in cybersecurity?

- a. Making data accessible when needed
- b. Preventing unauthorized access or disclosure of sensitive information
- c. Replicating malicious code
- d. Verifying the identity of users

Answer: b) Preventing unauthorized access or disclosure of sensitive information

44. What is the primary focus of the Institutionalization Phase in the history of the Internet?

- a. Commercialization
- b. Conceptualizing and implementing fundamental building blocks
- c. Providing funding and legitimization
- d. Regulation

Answer: c) Providing funding and legitimization

45. What is the primary challenge posed by insider threats in cybersecurity?

- a. High internet speed
- b. Lack of resources
- c. Difficulty in detection and prevention
- d. Abundance of technical knowledge

Answer: c) Difficulty in detection and prevention

46. Which component translates human-readable domain names into IP addresses in Cyberspace?

- a. HTTP
- b. DNS
- c. TCP
- d. IP

Answer: b. DNS

47. Which protocol is used for secure data transfer over the web?

- a. HTTP
- b. FTP
- c. HTTPS
- d. TCP

Answer: c. HTTPS

48. What does ARPANET stand for?

- a. Advanced Research Projects Agency Network
- b. American Research Project for Advanced Networking
- c. Association of Research Professionals and Networking
- d. Automated Research Program for Advanced Network Technologies

Answer: a. Advanced Research Projects Agency Network

49. What is the role of web browsers like Google Chrome and Mozilla Firefox?

- a. Store data
- b. Create websites
- c. Access and interact with web content
- d. Manage hardware resources

Answer: C) Access and interact with web content

50. Which protocol is responsible for the actual delivery of packets in TCP/IP?

- a. TCP
- b. IP
- c. HTTP
- d. DNS

Answer: b. IP
